### PRODUCT NEWS

#### Composite Doors

We are pleased to inform you that we are now fabricating our own Composite doors. We use a high standard slab and fit Yale lock hardware together with hinges and handles, knockers and any other options. As with our PVCu coloured doors we can supply Composite doors in White and the range of colours-on-white including Rosewood, Oak, Burgandy, Poppy Red, Royal Blue, Olive Green and Ebony.

The doors can be supplied unglazed or glazed with a variety of options including Plain, Opaque, Georgian Bar, Diamond or Square Leads, Films and Bevels.

The Composite doors are available in the standard Eurocell 70mm Logik door frame and will thus fit with our standard range of windows. Designs and prices are attached.

#### Thermologik Slim Frame and Sash

The Thermologik Outer Frame is now available in both Bevelled and Ovolo systems. The Bevelled system is available in White, Rosewood and Golden Oak and the Ovolo system is available in White only. Remember that we can use the Thermologik outer frame as a PVCu low threshold to residential doors. This frame profile is 10mm narrower than the Main Frame and thus offers an excellent cost effective choice to the low aluminium threshold.

It has been advised that Eurocell are to introduce a Thermologik sash profile in the Autumn this year. The benefits of using the Thermologik sash will be increased thermal insulation and energy gains (for high specifications of sealed units). It will be possible to achieve an A+8 BFRC Rating.

### TECHNICAL NEWS

#### Building Regulations

There are planned changes to the Building Regulations Part L which includes both dwellings and other buildings. The Government plans to reduce carbon emissions to zero for dwellings by 2016 and for other buildings by 2018. It is planned that the Building Regulations Part L 1B will require windows for Existing Dwellings to achieve a BFRC Rating of C (1.5 U) and for doors to have a U Value of 1.8. More information will follow as it is published.
